

GREEN DESIGN

IMPROVE AIR QUALITY
We are proud to announce our new line of environmentally safe, **formaldehyde free** plywood cabinets

REDUCED WASTE
State of the art manufacturing technology to optimize waste reduction.

RECYCLING PROGRAMS
AyA works to continuously improve company wide recycling programs

ECO-FINISHING
AyA uses only furniture quality, UV cured, environmentally friendly low HAPS finishes.

The **HEALTHY ALTERNATIVE: AyA Kitchens** launches new formaldehyde free plywood box

It is no secret that cabinets come from trees. As a responsible company one of our main goals is to give back and help out the environment which makes our business possible. AyA Kitchens and Baths is proud to offer a green design option which is our unique environmentally safe, formaldehyde free plywood cabinet. AyA's formaldehyde free plywood cabinets eliminate product emissions and are compliant with the U.S. Green Building Council's Leadership in Energy & Environmental Design's (LEED) EQ Credit 4.4 for Low-Emitting Materials: Composite Wood. AyA Kitchens is one of the leaders in the cabinet industry when it comes to reducing waste, re-using materials, and recycling wood, finishes and packaging. We also make use of eco-friendly products such as low HAPS (Hazardous Air Pollutants) finishes and our exclusive UV cured topcoat. We understand that in today's world we all need to do our part to help out the environment and we are constantly looking to find ways in which AyA Kitchens can continue to contribute and promote the benefits of sustainable design and eco-friendly business practices.
